FEATHER RIVER WATERSHED			
Butt Valley Reservoir Planning Unit			
<p>Sustainable Forestry All forestry activities in Plumas County by PG&E, the Stewardship Council, as well as successors should specifically mandate coordination with the community-specific prescriptions in the Plumas County Community Wildfire Protection Plan, adopted by the State Fire Marshall, the Board of Supervisors and the Plumas County Fire Safe Council (on private land), as well as the Herger Feinstein Quincy Library Group Act on National Forest lands and other future county fire and forestry policies. Objectives should stress collaboration with these efforts. These existing documents should be gathered by the Council and specifically included in the appendices. (FR-14). PG&E is currently actively promoting carbon offset opportunities for its ratepayers. PG&E also controls and manages a substantial land base in "timbered acres" (V.1, Appendix 6-2). The 51,700 acres statewide (including 5,350 acres in Plumas County) could be managed in ways designed to enhance carbon sequestration and "additionality". This would assist the implementation of AB 32 (global warming response) for both the state and the ratepayers.</p>	John Sheehan	Yes	<p>Due to the breadth and scope of the LCP, and the geography it encompasses, there are a significant number of important reference documents. To keep the LCP as manageable a document as possible, reference document citations are listed in the Sources section of the Supporting Analysis for Recommendations, but are not included in hard copy within the LCP. Text has been added to the Supporting Analysis for Recommendations and main Volume II documents to include coordination of development of the forest and fuels management plans with relevant county plans. Coordination with U.S. Forest Service (USFS) management prescriptions and practices is currently included as part of the potential measures, and would provide the coordination suggested related to the Herger Feinstein Quincy Library Group Act. As per the Settlement Agreement and Stipulation, PG&E must protect the Watershed Lands with perpetual conservation easements, or some equivalent legal mechanism, to preserve and enhance six Beneficial Public Values (BPVs), including sustainable forestry. Details regarding how forest resources would be managed in the future, including timber management and forest prescriptions, would be developed as part of the recommended forest management plan for this planning unit. Conservation easements, and overall objectives for management plans, will be developed as part of the disposition process and will be included in the Disposition Packages (Volume IIIs). Specifics of management plans will likely be developed post transaction.</p>
