PIT-MCLOUD RIVER WATERSHED			
Fall River Valley Planning Unit			
Friends of the River recommends that the PG&E parcel that connects McArthur Road to the Fall River be managed to provide public boating and fishing access to the Fall River.	Friends of the River	No	Comment noted. There is private land along the Fall River, between McArthur Road and the planning unit parcel. Given past discussions with the landowner and the history of access at this site, providing public access at this point seems unlikely. Therefore, public boating and fishing access at this parcel were not recommended.
If boat launching is allowed at day use area it should be LIMITED to hand carry, paddle power boats only.	Michael Millington	No	The potential measures in Volume II are intended to be illustrative in nature. Which measures carry forward into implementation, and the specific details around those measures, will be determined during the disposition process. There will be opportunities for the public and stakeholders to engage with the Stewardship Council and other stakeholders on this topic as well as other topics related to the disposition and future management and stewardship of the lands. The Stewardship Council will provide public notice and encourage participation in meetings, workshops, and other appropriate methods of participation in the planning process.
Parking area off McArthur Rd. should be kept to less than 10 cars. No Trailers.	Michael Millington	No	The potential measures in Volume II are intended to be illustrative in nature. Which measures carry forward into implementation, and the specific details around those measures, will be determined during the disposition process. There will be opportunities for the public and stakeholders to engage with the Stewardship Council and other stakeholders on this topic as well as other topics related to the disposition and future management and stewardship of the lands. The Stewardship Council will provide public notice and encourage participation in meetings, workshops, and other appropriate methods of participation in the planning process.

Pit-McCloud River Watershed

Sufficient signage needs to be installed reminding fisherman of the special regulations for the upper Fall River.	Michael Millington	Yes	In the Supporting Analysis for Recommendations, the sentence regarding signage at the day use area has been revised to include the idea of providing signage regarding special fishing regulations.
Add "surrounded by private and Tribal Land."	Pit River Tribe	Yes	Suggested text has been added to the Overview section of the Existing Conditions description.
Wetlands occur "throughout" the planning unit.	Pit River Tribe	Yes	Though wetlands have only been seen near McArthur Road, it is likely that wetlands may occur in other locations. Text has been changed to reflect the fact that additional wetlands may intermittently exist adjacent to watercourses that occur throughout the planning unit.
A significant work has been completed by UC Davis, USDA Agricultural Research Service, California Department of Food and Agriculture, and CA Department of Water Resources documenting aquatic and terrestrial resources within this planning unit. Contact Tribe for information.	Pit River Tribe	No	Comment noted. The Stewardship Council will contact the Tribe regarding this work, which would likely be useful during the development of the Disposition Package.
HISTORIC RESOURCES: Add "Pit River Tribe Ahjumawi Band."	Pit River Tribe	Yes	Text has been changed to Ahjumawi Band of the Pit River Tribe in the Historic Resources section of the Existing Conditions description.
FISH PLANT AND WILDLIFE HABITAT: Add "noxious and aquatic weeds."	Pit River Tribe	Yes	Noxious weeds include both land and aquatic weeds. For instance, in California hydrilla is listed as a noxious weed. To clarify this, text has been added to the description of the noxious weed management plan measure in the Supporting Analysis for Recommendations stating that the plan would include management of both terrestrial and aquatic weeds.
ASSESS NEED FOR MUSKRAT CONTROL: Not all sedimentation caused by muskrats.	Pit River Tribe	No	Comment noted. Text in the Supporting Analysis for Recommendations states: "In recent years, the Fall River has experienced a high sediment load. Muskrat burrowing can cause bank erosion and breakdown, thereby contributing sediment into the river." Muskrats are not inferred to be the sole cause of the high sediment load.

PRESERVATION OF HISTORIC VALUES: Add "cultural resource and ethnographic studies" and add to Historic Properties.	Pit River Tribe	Yes	A potential measure has been added to Volume II to conduct an ethnographic study of the planning unit to identify traditional use areas. In addition, text referencing the ethnographic study has been added to the description of the cultural resource management plan measure in the Supporting Analysis for Recommendations.
